Background	general receptor for phosphoinositides 1 associated scaffold protein(GRASP) Homo sapiens This gene encodes a protein that functions as a molecular scaffold, linking receptors, including group 1 metabotropic glutamate receptors, to neuronal proteins. The encoded protein contains conserved domains, including a leucine zipper sequence, PDZ domain and a C-terminal PDZ-binding motif. Alternately spliced transcript variants have been observed for this gene.[provided by RefSeq, Dec 2012],
Other	GRASP, General receptor for phosphoinositides 1-associated scaffold protein (GRP1-associated scaffold protein)
