<b>Background</b>	glutamate ionotropic receptor kainate type subunit 5(GRIK5) Homo sapiens This gene encodes a protein that belongs to the glutamate-gated ionic channel family. Glutamate functions as the major excitatory neurotransmitter in the central nervous system through activation of ligand-gated ion channels and G protein-coupled membrane receptors. The protein encoded by this gene forms functional heteromeric kainate-preferring ionic channels with the subunits encoded by related gene family members. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2014],		
<b>Other</b>	GRIK5 GRIK2, Glutamate receptor, ionotropic kainate 5 (Excitatory amino acid receptor 2) (EAA2) (Glutamate receptor KA-2) (KA2)
