Background	HECT domain and ankyrin repeat containing E3 ubiquitin protein ligase 1(HACE1) Homo sapiens This gene encodes a HECT domain and ankyrin repeat-containing ubiquitin ligase. The encoded protein is involved in specific tagging of target proteins, leading to their subcellular localization or proteasomal degradation. The protein is a potential tumor suppressor and is involved in the pathophysiology of several tumors, including Wilms' tumor. [provided by RefSeq, Mar 2016],
Other	HACE1 KIAA1320, E3 ubiquitin-protein ligase HACE1 (EC 6.3.2.-) (HECT domain and ankyrin repeat-containing E3 ubiquitin-protein ligase 1)
