Background	hepatic and glial cell adhesion molecule(HEPACAM) Homo sapiens The protein encoded by this gene is a single-pass type I membrane protein that localizes to the cytoplasmic side of the cell membrane. The encoded protein acts as a homodimer and is involved in cell motility and cell-matrix interactions. The expression of this gene is downregulated or undetectable in many cancer cell lines, so this may be a tumor suppressor gene. [provided by RefSeq, Jul 2011],
Other	HEPACAM, Hepatocyte cell adhesion molecule (Protein hepaCAM)
