<b>Background</b>	heat shock protein 90 alpha family class B member 1(HSP90AB1) Homo sapiens This gene encodes a member of the heat shock protein 90 family; these proteins are involved in signal transduction, protein folding and degradation and morphological evolution. This gene encodes the constitutive form of the cytosolic 90 kDa heat-shock protein and is thought to play a role in gastric apoptosis and inflammation. Alternative splicing results in multiple transcript variants. Pseudogenes have been identified on multiple chromosomes. [provided by RefSeq, Dec 2012],		
<b>Other</b>	HSP90AB1, Heat shock protein HSP 90-beta
