<b>Background</b>	inhibitor of Bruton tyrosine kinase(IBTK) Homo sapiens Bruton tyrosine kinase (BTK) is a protein tyrosine kinase that is expressed in B cells, macrophages, and neutrophils. The protein encoded by this gene binds to BTK and downregulates BTK's kinase activity. In addition, the encoded protein disrupts BTK-mediated calcium mobilization and negatively regulates the activation of nuclear factor-kappa-B-driven transcription. This gene has a pseudogene on chromosome 18. Alternative splicing results in multiple transcript variants encoding distinct isoforms. [provided by RefSeq, Jul 2014],
<b>Other</b>	IBTK BTKI KIAA1417, Inhibitor of Bruton tyrosine kinase (IBtk)
