<b>Background</b>	interferon induced transmembrane protein 3(IFITM3) Homo sapiens The protein encoded by this gene is an interferon-induced membrane protein that helps confer immunity to influenza A H1N1 virus, West Nile virus, and dengue virus. Two transcript variants, only one of them protein-coding, have been found for this gene. Another variant encoding an N-terminally truncated isoform has been reported, but the full-length nature of this variant has not been determined. [provided by RefSeq, May 2012],		
<b>Other</b>	IFITM3, Interferon-induced transmembrane protein 3
