Conjugation			
Background	inositol-trisphosphate 3-kinase B(ITPKB) Homo sapiens The protein encoded by this protein regulates inositol phosphate metabolism by phosphorylation of second messenger inositol 1,4,5-trisphosphate to Ins(1,3,4,5)P4. The activity of this encoded protein is responsible for regulating the levels of a large number of inositol polyphosphates that are important in cellular signaling. Both calcium/calmodulin and protein phosphorylation mechanisms control its activity. [provided by RefSeq, Jul 2008],		
Other	ITPKB, Inositol-trisphosphate 3-kinase B
