<b>Conjugation</b>			
<b>Background</b>	patatin like phospholipase domain containing 8(PNPLA8) Homo sapiens This gene encodes a member of the patatin-like phospholipase domain containing protein family. Members of this family are phospholipases which catalyze the cleavage of fatty acids from membrane phospholipids. The product of this gene is a calcium-independent phospholipase. Mutations in this gene have been associated with mitochondrial myopathy with lactic acidosis. Multiple transcript variants encoding different isoforms have been found for this gene. <b>Other</b>	PNPLA8, Calcium-independent phospholipase A2-gamma
