Background	potassium voltage-gated channel subfamily J member 8(KCNJ8) Homo sapiens Potassium channels are present in most mammalian cells, where they participate in a wide range of physiologic responses. The protein encoded by this gene is an integral membrane protein and inward-rectifier type potassium channel. The encoded protein, which has a greater tendency to allow potassium to flow into a cell rather than out of a cell, is controlled by G-proteins. Defects in this gene may be a cause of J-wave syndromes and sudden infant death syndrome (SIDS). [provided by RefSeq, May 2012],		
Other	KCNJ8, ATP-sensitive inward rectifier potassium channel 8 (Inward rectifier K(+)) channel Kir6.1) (Potassium channel, inwardly rectifying subfamily J member 8) (uKATP-1)
