Background	JunD proto-oncogene, AP-1 transcription factor subunit(JUND) Homo sapiens The protein encoded by this intronless gene is a member of the JUN family, and a functional component of the AP1 transcription factor complex. This protein has been proposed to protect cells from p53-dependent senescence and apoptosis. Alternative translation initiation site usage results in the production of different isoforms (PMID:12105216). [provided by RefSeq, Nov 2013],
Other	JUND, Transcription factor jun-D
