<b>Background</b>	potassium voltage-gated channel subfamily E regulatory subunit 1(KCNE1) Homo sapiens The product of this gene belongs to the potassium channel KCNE family. Potassium ion channels are essential to many cellular functions and show a high degree of diversity, varying in their electrophysiologic and pharmacologic properties. This gene encodes a transmembrane protein known to associate with the product of the KVLQT1 gene to form the delayed rectifier potassium channel. Mutation in this gene are associated with both Jervell and Lange-Nielsen and Romano-Ward forms of long-QT syndrome. Alternatively spliced transcript variants encoding the same protein have been identified. [provided by RefSeq, Jul 2008],		
<b>Other</b>	KCNE1, Potassium voltage-gated channel subfamily E member 1 (Delayed rectifier potassium channel subunit Isk) (IKs producing slow voltage-gated potassium channel subunit beta Mink) (Minimal potassium channel)
