Background	protein kinase D2(PRKD2) Homo sapiens The protein encoded by this gene belongs to the protein kinase D (PKD) family of serine/threonine protein kinases. This kinase can be activated by phorbol esters as well as by gastrin via the cholecystinin B receptor (CCKBR) in gastric cancer cells. It can bind to diacylglycerol (DAG) in the trans-Golgi network (TGN) and may regulate basolateral membrane protein exit from TGN. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul 2008],		
Other	PRKD2 PKD2 HSPC187, Serine/threonine-protein kinase D2 (EC 2.7.11.13) (nPKC-D2)
