<b>Conjugation</b>			
<b>Background</b>	X-ray repair cross complementing 6(XRCC6) Homo sapiens The p70/p80 autoantigen is a nuclear complex consisting of two subunits with molecular masses of approximately 70 and 80 kDa. The complex functions as a single-stranded DNA-dependent ATP-dependent helicase. The complex may be involved in the repair of nonhomologous DNA ends such as that required for double-strand break repair, transposition, and V(D)J recombination. High levels of autoantibodies to p70 and p80 have been found in some patients with systemic lupus erythematosus. [provided by RefSeq, Jul 2008],		
<b>Other</b>	XRCC6, X-ray repair cross-complementing protein 6
