<b>Background</b>	Rho guanine nucleotide exchange factor 12(ARHGEF12) Homo sapiens Rho GTPases play a fundamental role in numerous cellular processes that are initiated by extracellular stimuli working through G protein-coupled receptors. The encoded protein may form a complex with G proteins and stimulate Rho-dependent signals. This protein has been observed to form a myeloid/lymphoid fusion partner in acute myeloid leukemia. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2014],
<b>Other</b>	ARHGEF12, Rho guanine nucleotide exchange factor 12
