<b>Conjugation</b>			
<b>Background</b>	lipase I(LIPI) Homo sapiens The protein encoded by this gene is a phospholipase that hydrolyzes phosphatidic acid to produce lysophosphatidic acid. Defects in this gene are a cause of susceptibility to familial hypertriglyceridemia. This gene is also expressed at high levels in Ewing family tumor cells. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Dec 2014],		
<b>Other</b>	LIPI, Lipase member I
