<b>Background</b>	microtubule associated serine/threonine kinase family member 4(MAST4) Homo sapiens This gene encodes a member of the microtubule-associated serine/threonine protein kinases. The proteins in this family contain a domain that gives the kinase the ability to determine its own scaffold to control the effects of their kinase activities. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Mar 2014],
<b>Other</b>	MAST4, Microtubule-associated serine/threonine-protein kinase 4
