Conjugation			
Background	MNAT1, CDK activating kinase assembly factor(MNAT1) Homo sapiens The protein encoded by this gene, along with cyclin H and CDK7, forms the CDK-activating kinase (CAK) enzymatic complex. This complex activates several cyclin-associated kinases and can also associate with TFIIF to activate transcription by RNA polymerase II. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011],		
Other	MNAT1, CDK-activating kinase assembly factor MAT1
