<b>Background</b>	mannose binding lectin 2(MBL2) Homo sapiens This gene encodes the soluble mannose-binding lectin or mannose-binding protein found in serum. The protein encoded belongs to the collectin family and is an important element in the innate immune system. The protein recognizes mannose and N-acetylglucosamine on many microorganisms, and is capable of activating the classical complement pathway. Deficiencies of this gene have been associated with susceptibility to autoimmune and infectious diseases. [provided by RefSeq, Jul 2008],
<b>Other</b>	MBL2 COLEC1 MBL, mannose-binding lectin (protein C) 2, soluble (opsonic defect)
